

Amendments of the Claims

This listing of claims will replace all prior versions and listings of claims in this application.

Listing of the Claims:

1. (Currently Amended) A television system comprising:

a receiver for receiving a television signal including a television program, [[and]] an address for a data site, and information about the television program comprising a schedule of the television program wherein data corresponding to the data site address comprises commands for controlling recording of the television program;

a decoder for extracting the data site address from the television signal;

a memory for storing the extracted address and the information about the television program;

a communication device in two-way communication with the data service provider;

a user input device for receiving user input; and

a microprocessor coupled to the memory and the communication device and configured to:

store data for an icon representative of the data site address and superimpose the icon over the television program on a display device; [[,]]

receive a user selection of the icon from the user input device;

[[to]] retrieve the data site address and the information about the television program from the memory in response to the [[a]] user selection; ~~and to~~

control the communication device to retrieve the data corresponding to the data site address from the data service provider in response to the user selection of the icon; and[[,]]

a television monitor for simultaneously displaying ~~wherein~~ the television program, the data retrieved from the data service provider, and the information about the television program ~~are displayed~~ in three non-overlapping regions ~~on the display screen.~~

2. (Original) The television system of claim 1, wherein the data service provider is an Internet service provider.

3. (Original) The television system of claim 1, wherein the icon includes a textual description of the data corresponding to the data site address.

4. (Original) The television system of claim 1, wherein the microprocessor displays the icon substantially immediately after receiving the data site address.

5. (Original) The television system of claim 1, further comprising a picture-in-picture (PIP) generator, wherein the television program is displayed in a PIP window simultaneously with the information representative of the data site address on the display device.

6. (Original) The television system of claim 1, wherein the data corresponding to the data site address is purchasing information.

7. (Cancelled)

8. (Original) The television system of claim 1, wherein the decoder is a vertical blanking interval (VBI) decoder.

9. (Original) The television system of claim 1, further comprising a portable device and wherein the microprocessor is further configured to transmit the received data site address to the portable device for storage.

10. (Original) The television system of claim 9, wherein the microprocessor transmits the received data site address to the portable device in a wireless manner.

11. (Original) The television system of claim 9, wherein the portable device includes means for a two-way communication with the data site using the stored data site address.

12. (Original) The television system of claim 11, wherein the means for a two-way communication with the data site is a wireless communication means.

13. (Currently Amended) A method for enhancing viewing of a television program with interactive information retrieval comprising:

receiving a television signal including a television program, ~~[[and]]~~ an address for a data site, and information about the television program comprising a schedule of the television program ~~wherein data corresponding to the data site address comprises commands for controlling recording of the television program;~~

extracting the data site address from the television signal by a decoder;

storing the extracted address and the information about the television program in a memory;

~~receiving user input;~~

storing data for an icon representative of the data site address and superimposing the icon over the television program on a display device;

receiving a user selection of the icon;

retrieving the data site address and the information about the television program from the memory in response to a user selection; and

retrieving the data corresponding to the data site address from the data service provider in response to the user selection of the icon; and ~~[[,]]~~

~~wherein~~ simultaneously displaying the television program, the data retrieved from the data service provider, and the information about the television program ~~are displayed~~ in three non-overlapping regions on the display screen.

14. (Original) The method of claim 13, wherein the data service provider is an Internet service provider.

15. (Original) The method of claim 13, wherein the icon includes a textual description of the data corresponding to the data site address.

16. (Original) The method of claim 13, wherein the icon is displayed substantially immediately after receiving the data site address.

17. (Original) The method of claim 13, further comprising displaying the television program in a picture-in-picture (PIP) window simultaneously with the information representative of the data site address.

18. (Original) The method of claim 13, wherein the data corresponding to the data site address is purchasing information.

19. (Cancelled)

20. (Original) The method of claim 13, wherein the address for the data site is received in a vertical blanking interval (VBI) of the television signal.

21. (Withdrawn) A method for enhancing viewing of a television program with interactive information comprising:

receiving a television signal including a television program and an address for a data site;

extracting the data site address from the television signal;

establishing a connection with a data site corresponding to the data site address;

displaying information about a related television program from the data site; and

selecting the displayed information about the related television program from the data site to schedule a recording or viewing of the related television program.

22. (Withdrawn) The method of claim 21, further comprising receiving channel, day, time, and length information for the selected television program from the data site.

23. (Withdrawn) The method of claim 21, wherein the address for the data site is received in a vertical blanking interval (VBI) of the television signal.

24. (Withdrawn) The method of claim 21, wherein the data site is a web site.

25. (Withdrawn) A television system for enhancing viewing of a television program with interactive information comprising:

a receiver for receiving a television signal including a television program and an address for a data site;

a decoder for extracting the data site address from the television signal;

a microprocessor configured to establish a connection with a data site corresponding to the data site address and display information about a related television program from the data site in a display monitor; and

a user input device for selecting the displayed information about the related television program from the data site to schedule a recording or viewing of the related television program.

26. (Withdrawn) The television system of claim 25, further comprising means for receiving channel, day, time, and length information for the selected television program from the data site.

27. (Withdrawn) The television system of claim 25, wherein the decoder is a vertical blanking interval (VBI) decoder.

28. (Withdrawn) The television system of claim 25, wherein the data site is a web site.

29. (Withdrawn) A method for enhancing viewing of a television program with interactive information comprising:

establishing a connection with a remote data site;

linking an article at the data site with data related to a television program;

displaying the article from the data site; and=

selecting an identifier in the displayed article to schedule a recording or viewing of the television program.

30. (Withdrawn) The method of claim 29, further comprising receiving channel, day, time, and length information for the selected television program from the data site.

31. (Withdrawn) The method of claim 29, wherein the data site is a web site.

32. (Withdrawn) The method of claim 31, wherein the identifier is a hypertext in the article.

33. (Withdrawn) A television system for enhancing viewing of a television program with interactive information comprising:

means for establishing a connection with a remote data site;

means for linking an article at the data site with data related to a television program;

means for displaying the article from the data site; and

means for selecting an identifier in the displayed article to schedule a recording or viewing of the television program.

34. (Withdrawn) The television system of claim 33, further comprising means for receiving channel, day, time, and length information for the selected television program from the data site.

35. (Withdrawn) The television system of claim 33, wherein the data site is a web site.

36. (Withdrawn) The method of claim 35, wherein the identifier is a hypertext in the article.

37. (New) The system of claim 1, wherein the microprocessor is further configured to format the data retrieved from the data service provider to accommodate the simultaneous display of the television program, the data retrieved from the data service provider, and the information about the television program in three non-overlapping regions of a display screen.

38. (New) The method of claim 1, further comprising formatting the data retrieved from the data service provider to accommodate the simultaneous display of the television program, the data retrieved from the data service provider, and the

Application No. 10/718,187
Final Office Action of August 22, 2008
Amendment dated February 23, 2009

information about the television program in three non-overlapping regions of a display screen.
